

## **Department of Computer Science and Engineering** **(Accredited by NBA)**

### **Vision of the Department**

To craft professionally skilled engineers with research orientation, innovative insights and a passion for life-long learning to meet the needs of Industry and Society.

### **Mission of the Department**

**M1:** To offer need based curriculum in collaboration with industry.

**M2:** To inculcate professional skills with innovative thinking to address societal problems of multidisciplinary nature.

**M3:** To provide a congenial environment to learn and exhibit soft skills.

**M4:** To promote research culture and the need for life-long learning.

### **Program Educational Objectives (PEOs) - UG**

**PEO1:** Excel in professional career and higher education by acquiring knowledge in mathematical, computing and engineering principles.

**PEO2:** Analyse societal problems and provide technically competent solutions.

**PEO3:** Possess academic excellence through innovative insights, soft skills and life-long learning.

### **Program Outcomes (POs) - UG Engineering Graduates will be able to:**

**PO1: Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problems.

**PO2: Problem analysis:** Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.

**PO3: Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

**PO4: Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO5: Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modeling to complex engineering activities, with an understanding of the limitations.

**PO6: The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**PO7: Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO8: Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO9: Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO10: Communication:** Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO11: Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO12: Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### **Program Specific Outcomes (PSOs) - UG**

**PSO1:** Demonstrate the uses of knowledge by writing programs and integrate them with hardware/software products in multidisciplinary environment.

**PSO2:** Participate in planning and implementation of solutions to cater the industry specific requirements.

**Scheme of Teaching and Examination-2020**  
**Outcome-Based Education (OBE) and Choice Based Credit System (CBCS)**  
 (Effective from the academic year 2020-21)

**VII Semester BE**

**Academic year: 2023-24**

Subjects and Syllabus as per AICTE- Model Curriculum for UG Course in Engg. & Tech.- Jan. 2018						Teaching Hours/week				Examination			
Sl. No.	Course and Course Code		Course Title	Teaching Department	Board of Exam	L	T	P	C	Duration in Hrs.	CIE	SEE	Total Marks

CS7PE33: Deep Learning	CS7PE43: Android Programming	CS7PE53: Software Testing

**SRI SIDDHARTHA INSTITUTE OF TECHNOLOGY- TUMAKURU**

(A constituent College of Siddhartha Academy of Higher Education, Tumakuru)

Academic year 2023-2024

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VII</b>
<b>Subject: Cryptography and Network Security</b>			
<b>Subject Code:</b>	<b>CS7TH1</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	Understand the fundamentals of cryptography
2	Acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity
3	Describe how to deploy encryption techniques and various key distribution schemes to secure data in transit across data networks
4	Design security applications in the field of information technology

Unit	Description	Hrs
I	Introduction, Symmetric ciphers Introduction: The OSI Security Architecture, Security Services, Mechanisms and Attacks, A Model of Network Security. Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Steganography. Block Cipher and the Data Encryption Standard: Block Cipher principles, The Data Encryption Standard, DES Example, Strength of DES.	8
II	Symmetric ciphers (Contd...) Block Cipher Operation: Multiple Encryption and triple DES, Electronic Code Book, Cipher Block Chaining Mode, Cipher Feedback Mode, Output Feedback Mode, Counter Mode. Number Theory: Prime Numbers, Fermat's and Euler's Theorems, Testing for Primality. Public-Key Cryptography and RSA: Principles of Public-Key Cryptosystems, The RSA Algorithm. Diffie-Hellman Key Exchange.	8
III	Cryptographic data integrity algorithms Cryptographic Hash Functions: Applications of Cryptographic hash functions, Two simple hash Functions, Secure Hash Algorithm. Message Authentication: Authentication Requirements, Authentication Functions, Message Authentication Codes, Security of MACs, MACs based on Hash Functions: HMAC. Digital Signatures: Digital Signatures, Digital Signature Standard.	8
IV	Key management, Transport-level security Key Management and Distribution: Symmetric Key distribution using symmetric encryption, Symmetric Key distribution using Asymmetric encryption, Distribution of public keys, X.509 certificates, Kerberos. Transport level security: Web Security considerations, Secure Sockets Layer and Transport Layer Security.	8
V	UNIT V: Internet security, System security Electronic Mail Security: Pretty Good Privacy.	8

IP Security: Overview, IP Security Policy. Intruders: Intruders, Intrusion detection. Malicious Software: Types of Malicious Software Viruses. Firewalls: The need for Firewalls, Firewall Characteristics, Types of Firewalls.	
--	--

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Explain the basic issues addressed by network security
<b>CO2</b>	Differentiate between working of typical symmetric and asymmetric ciphers.
<b>CO3</b>	Apply effective cryptographic techniques to provide security services in different applications and computer network.
<b>CO4</b>	Identify and describe vulnerabilities, attacks and IP security protocols in Internet domain

**Course Articulation Matrix**

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VII</b>
<b>Subject: Big Data &amp; Analytics</b>			
<b>Subject Code:</b>	<b>CS7TH2</b>	<b>L – T – P – C:</b>	<b>3–0–0–3</b>

Sl. No	Course Objectives
1	Understand the Big Data Platform and its Use cases
2	Introduce students the concept and challenge of big data
3	Provide HDFS Concepts and Interfacing with HDFS
4	Teach students in applying skills and tools to manage and analyze the big data

Unit	Description	Hrs
I	<p><b>Understanding Hadoop Ecosystem</b>            Introducing Hadoop, Cloud Computing and Big Data: Cloud Delivery Models, Cloud Services for Big Data, Cloud Providers in Big DataMarket Hadoop Ecosystem, Hadoop Distributed File System: HDFS Architecture, Concept of Blocks in HDFS in HDFS Architecture, NameNodes and DataNodes, HDFS commands, Features of HDFS, MapReduce, Hadoop YARN.</p>	8
II	<p><b>Introducing HBase</b>            HBase Architecture, Regions, Storing Big Data with Hbase, Interacting with Hadoop Ecosystem, Hbase in Operation – Programming with HBase, Combining HBase and HDFS: REST and Thrift, Data Integrity in HDFS, Features of HBase, Role of HBase in Big dataProcessing : Characteristics of HBase.</p> <p><b>Understanding MapReduce Fundamentals</b>            The MapReduce Framework: Exploring the Features of MapReduce, working of MapReduce, Techniques to Optimize MapReduce Jobs,Uses of MapReduce,.</p>	8
III	<p><b>Understanding Big Data Technology Foundations</b>            Exploring the Big Data stack: Stack of layers in Big Data Architecture, Virtualization and Big Data, Virtualization approaches: server Virtualization, Application Virtualization, Network Virtualization, Processor and Memory Virtualization, Data and Storage Virtualization, Managing Virtualization with Hypervisor, Implementing Virtualization to work with Big Data.</p>	8
IV	<p><b>Introduction to MongoDB and Cassandra</b>            Introduction to MongoDB: What is and Why MongoDB? Terms used in RDBMS and MongoDB, Data types in MongoDB, MongoDB Query language.</p> <p><b>Introduction to Cassandra</b>            Apache Cassandra, features, CQL data types, CQLSH, key spaces, CRUD, collections, TTL, using a counter, ALTER commands, import and export, query system tables.</p>	8
V	<p><b>Introduction to Pig</b>            What is Pig? The Anatomy of Pig, Pig on Hadoop , Pig Philosophy, Use Case for Pig: ETL Processing, Pig Latin Overview , Data Types in Pig, Running Pig , Execution Modes of Pig ,HDFS Commands ,Relational Operators, Eval Function, Complex Data Types ,Piggy Bank, User-Defined Functions (UDF) ,Parameter Substitution , Diagnostic Operator , Word Count Example using Pig,When to use Pig? When not to use Pig? Pig at Yahoo!,Pig versus Hive.</p>	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Identify the characteristics of datasets and compare the trivial data and big data for various applications.
<b>CO2</b>	Understand the concept of opensource software frame work and its core components.
<b>CO3</b>	Compare and Contrast different Hadoop supporting tools With traditional tool
<b>CO4</b>	How BigData can be analyzed to extract knowledge and apply tools for bigdata analytics

**Course Articulation Matrix**

<b>Subject: Natural Language Processing</b>			
<b>Subject Code:</b>	<b>CS7PE31</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

SI. No	Course Objectives
1	Understand the background and driving forces for taking an Agile Approach to software development.
2	Understand the business value of adopting Agile approaches and the Agile development practices.
3	Learn design principles ,refactoring, automated build tools, version Control and continuous integration.
4	Understand testing activities within an Agile project.

Unit	Description	Hrs
I	<b>Introduction:</b> Knowledge in Speech and Language Processing, Ambiguity, Models and Algorithms; Language, Thought, and Understanding; The State of the Art and The Near- Term Future; Regular Expressions and Automata; Morphology and Finite-State Transducers: Lexicon-free FSTs: The Porter Stemmer, Human Morphological Processing	8
II	<b>N-grams:</b> Counting Words in Corpora, Smoothing, N-grams for Spelling and Pronunciation, Entropy; Word Classes and Part-of-Speech Tagging: Part-of-Speech Tagging, Rule-based Part-of-speech Tagging, Stochastic Part-of-speech Tagging, Transformation-Based Tagging;	8
III	<b>Parsing with Context-Free Grammars:</b> Context-Free Grammars for English: Constituency, Context-Free Rules and Trees, Sentence- Level Constructions, The Noun Phrase.  The Earley Algorithm; Features and Unification: Feature Structures, Unification of Feature Structures, Features Structures in the Grammar, Implementing Unification, Parsing with Unification Constraints;	8
IV	<b>Lexicalized and Probabilistic Parsing:</b> Probabilistic Context-Free Grammars, Problems with PCFGs.  Representing Meaning: First Order Predicate Calculus, Some Linguistically Relevant Concepts, Related Representational Approaches, Alternative Approaches to Meaning;	8
V	<b>Semantic Analysis:</b> Syntax-Driven Semantic Analysis, Attachments for a Fragment of English; Lexical Semantics: Relations Among Lexemes and Their Senses, WordNet: A Database of Lexical Relations, The Internal Structure of Words.	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Interpret how speech and language technology relies on formal models to capture knowledge, and language processing deals with subparts of words (morphology).
<b>CO2</b>	Illustrate the way N-gram tool is used for spelling and pronunciation processing, and part-of-speech tagging mechanism using various categories.
<b>CO3</b>	Describe feature structures and unification operation which is used to combine them, and probabilistic parsing to capture more syntactic information.
<b>CO4</b>	Demonstrate the gap from language to commonsense Knowledge (semantic processing), and meanings associated with lexical items.
<b>CO5</b>	Illustrate natural language outputs construction from non-linguistic inputs and machine translation framework approaches.

**Course Articulation Matrix**

<b>Subject: High Performance Computing</b>			
<b>Subject Code:</b>	<b>CS7PE32</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	Understand the fundamentals of modern processor and parallel processing.
2	Acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
3	Describe how to deploy encryption techniques and various key distribution schemes to secure data in transit across data networks
4	Design security applications in the field of information technology

Unit	Description	Hrs
I	<b>Introduction to Parallel Computing:</b> Motivating Parallelism, Scope of Parallel Computing, Parallel Programming Platforms: Implicit Parallelism: Trends in Microprocessor Architectures, Limitations of Memory System Performance, Dichotomy of Parallel Computing Platforms, Physical Organization of Parallel Platforms, Communication Costs in Parallel Machines, Routing Mechanisms for Interconnection Networks, Impact of Process-Processor Mapping and Mapping Techniques.	8
II	<b>Principles of Parallel Algorithm Design:</b> Preliminaries, Decomposition Techniques, Characteristics of Tasks and Interactions, Mapping Techniques for Load Balancing, Methods for Containing Interaction Overheads, Parallel Algorithm Models Basic Communication Operations: One-to-All Broadcast and All-to-One Reduction, All-to-All Broadcast and Reduction, All-Reduce and Prefix-Sum Operations, Scatter and Gather, All-to-All Personalized Communication, Circular Shift, Improving the Speed of Some Communication Operations	8
III	<b>Analytical Modeling of Parallel Programs:</b> Sources of Overhead in Parallel Programs, Performance Metrics for Parallel Systems, The Effect of Granularity on Performance, Scalability of Parallel Systems. Minimum Execution Time and Minimum Cost-Optimal Execution Time, Asymptotic Analysis of Parallel Programs Section 5.7. Other Scalability Metrics,  <b>Programming Using the Message-Passing Paradigm:</b> Principles of Message-Passing Programming, The Building Blocks: Send and Receive Operations, MPI: the Message Passing Interface, Topologies and Embedding, Overlapping Communication with Computation, Collective Communication and Computation Operations, Groups and Communicators	8
IV	<b>Programming Shared Address Space Platforms:</b> Thread Basics, Why Threads?, The POSIX Thread API, Thread Basics: Creation and Termination, Synchronization Primitives in Pthreads, Controlling Thread and Synchronization Attributes, Thread Cancellation, Composite Synchronization Constructs, Tips for Designing Asynchronous Programs, OpenMP: a Standard for Directive Based Parallel Programming Dense Matrix Algorithms: Matrix-Vector Multiplication, Matrix-Matrix Multiplication, Solving a System of Linear Equations Sorting: Issues in Sorting on Parallel Computers, Sorting Networks, Bubble Sort and its Variants, Quicksort, Bucket and Sample Sort.	8

V	<p><b>Graph Algorithms:</b> Definitions and Representation, Minimum Spanning Tree: Prim's Algorithm, Single-Source Shortest Paths: Dijkstra's Algorithm, All-Pairs Shortest Paths, Transitive Closure, Connected Components, Algorithms for Sparse Graphs, Search Algorithms for Discrete Optimization Problems: Definitions and Examples, Sequential Search Algorithms, Search Overhead Factor, Parallel Depth-First Search, Parallel Best-First Search, Speedup, Anomalies in Parallel Search Algorithms</p>	8
---	--	---

**Course Outcomes:**

Course outcome	Descriptions
CO1	Illustrate the key factors affecting performance of CSE applications.
CO2	Illustrate mapping of applications to high-performance computing systems
CO3	Apply hardware/software co-design for achieving performance on real-world applications

**Course Articulation Matrix**

<b>Subject: Deep Learning</b>			
<b>Subject Code:</b>	<b>CS7PE33</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

SI. No	Course Objectives
1	Understand the concepts of machine learning and deep networks
2	Explain optimization and generalization techniques.
3	Know the theory behind Convolutional Neural Networks, and Recurrent Neural Networks.
4	Understand deep learning application to solve real world problem

Unit	Description	Hrs
I	<b>Introduction to Deep Learning:</b> Introduction, Deep learning Model, Historical Trends in Deep Learning, Machine Learning Basics: Learning Algorithms, Supervised Learning Algorithms, Unsupervised Learning Algorithms.	8
II	<b>Feedforward Networks:</b> Introduction to Feedforward neural networks, Gradient-Based Learning, BackPropagation and Other Differentiation Algorithms. Regularization for Deep Learning.	8
III	<b>Optimization for Training Deep Models:</b> Empirical Risk Minimization, Challenges in Neural Network Optimization, Basic Algorithms: Stochastic Gradient Descent, Parameter Initialization Strategies, Algorithms with Adaptive Learning Rates: The AdaGrad algorithm, The RMSProp algorithm, Choosing the Right Optimization Algorithm. Right Optimization Algorithm.	8
IV	<b>Convolutional Networks:</b> The Convolution Operation, Pooling, Convolution and Pooling as an Infinitely Strong Prior, Variants of the Basic Convolution Function, Structured Outputs, Data Types, Efficient Convolution Algorithms, Random or Unsupervised Features- LeNet, AlexNet.	8
V	<b>Recurrent and Recursive Neural Networks:</b> Unfolding Computational Graphs, Recurrent Neural Network, Bidirectional RNNs, Deep Recurrent Networks, Recursive Neural Networks, The Long Short Term Memory and Other Gated RNNs. Applications: Large-Scale Deep Learning, Computer, Speech Recognition, Natural Language Processing and Other Applications.	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Explain the fundamental issues and challenges of Deep Learning data, model selection, and model complexity.
<b>CO2</b>	Analyse the architecture and working of various Deep Learning models.
<b>CO3</b>	Apply the suitable Deep Learning model for specific real time applications.
<b>CO4</b>	Implement deep learning algorithms on various real world problems.

SI. No	Course Objectives
1	Understand the background and driving forces for taking an Agile approach to software development.
2	Understand the business value of adopting Agile approaches and the Agile development practices.
3	Learn design principles, refactoring, automated build tools, version Control and continuous integration.
4	Understand testing activities within an Agile project.

Unit	Description	Hrs
I	<b>Fundamentals of Agile:</b> The Genesis of Agile, Introduction and background, Agile Manifesto and Principles, Overview of Scrum, Extreme Programming, Feature Driven development, Lean Software Development, Agile project management, Design and development practices in Agile projects,  Continuous Integration, Refactoring, Pair Programming, Simple Design.	8
II	<b>Agile Scrum Framework:</b> Introduction to Scrum, Project phases, Agile Estimation, Planning game, Product backlog, Sprint backlog, Iteration planning, User Stories, Characteristics and content of user stories, Project velocity, Burn down chart, Sprint planning and retrospective, Daily scrum, Scrum roles – Product Owner, Scrum Master, Scrum Team, Key challenges to implementing Agile  Development and Project management Frameworks	8
III	<b>Agile Software Design and Development:</b> Agile design practices, Difference between Agile and Traditional Approach, Role of design Principles including Single Responsibility Principle, Open Closed Principle, Liskov Substitution Principle, Dependency Inversion Principle in Agile Design, Interface Segregation Principles, Refactoring Techniques, Automated build tools, Version control.	8
IV	<b>Agile Testing:</b> Agile Testing, How is Agile Testing Different, Ten Principles for Agile Testers, Agile Testing Quadrants, Test-Driven Development(TDD), TDD Lifecycle, Acceptance tests, Managing testing cycle, Exploratory testing, Risk based testing, Regression tests, Why Automation, Tools to support the Agile tester.	8
V	<b>Industry Trends:</b> Agile Marketing, Challenges in Enterprise adoption of Agile methods, Agile ALM, Roles in an Agile project, Agile applicability framework, Agile in Distributed teams, Challenges in Agile, Agile methodology with cloud computing, Balancing Agility with Discipline, Agile rapid application development technologies.	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Interpret the business values of adopting Agile approaches to Software Development.
<b>CO2</b>	Apply agile development practices, design principles and refactoring to achieve agility.
<b>CO3</b>	Deploy automated build tools, version control and continuous integration.
<b>CO4</b>	Perform various testing activities within an Agile project.

<b>Subject: Android Programming</b>			
<b>Subject Code:</b>	<b>CS7PE42</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	To introduce Android platform and its architecture.
2	To learn activity creation and Android UI designing.
3	To be familiarized with Intent, Broadcast receivers and Internet services.
4	To integrate multimedia, camera and Location based services in Android Application.

Unit	Description	Hrs
I	<b>Mobility and Android</b> Introduction, Mobility Panorama, Mobile Platforms, App Development Approaches, Android Overview. Getting Started with Android.  Introduction, Setting up Development Environment, Saying Hello to Android, Traversing an Android App Project Structure, Logical Components of an Android App, Android Tool Repository, Installing and Running App Devices.  Learning with an Application-3Cheers Cable Introduction,3CheersCable App, Mobile App Development Challenges, Tenets of a Winning App.	8
II	<b>App User Interface</b> Introduction, Activity, UI Resources, UI Elements and Events, Interaction among Activities, Fragments, Action Bar. App Functionality- Beyond UI Introduction, Threads, AsyncTask,Service,Notifications,IntentsandIntentResolution,BroadcastReceivers,TelephonyandSMS.	8
III	<b>App Data - Persistence and Access</b> Introduction Flat Files, Shared Preferences, Relational Data, Data Sharing Across Apps, Enterprise Data. Graphics and Animation. Introduction, Android Graphics, Android Animation.	8
IV	<b>Multimedia</b> Introduction, Audio, Video and Images, Playback185,Capture and Storage. Location Services and Maps Introduction, Google Play Services, Location Services, Maps.	8
V	<b>Sensors:</b> Introduction, Sensors in Android, Android Sensor Framework, Motion Sensors, Position Sensors, Environment Sensors.  Testing Android Apps: Introduction, Testing Android App Components, App Testing Landscape Overview. Publishing Apps Introduction, Groundwork, Configuring, Packaging, Distributing.	8

**Course outcome:**

Course outcome	Descriptions
CO1	Able to understand various approaches and technologies for App development.
CO2	Capable of understanding, designing user interface app and implementing app functionalities.
CO3	Able to develop location services using device sensors while building android apps.
CO4	Capable of validating, packaging and moving apps to market.

<b>Department: Computer Science and Engineering</b>	<b>Semester:</b>	<b>VII</b>
<b>Subject: Information Storage and Management</b>		
<b>Subject Code:</b>	<b>CS7PE43</b>	<b>L - T - P - C: 3-0-0-3</b>

Sl. No	Course Objectives
1	To understand the basics of Storage Networks and Devices
2	To understand the availability of different storage technologies
3	To understand the working and availability of channels for communication
4	To know the applications of storage technologies, Backup & Recovery mechanisms

Unit	Description	Hrs
I	Introduction, Information Storage, Data centre infrastructure, Key challenges, Information Lifecycle, Server centric IT architecture and its limitations, Storage centric IT architecture and its advantages, Case study: Replacing a server with storage networks.	8
II	Architecture of intelligent disk subsystems, Hard disks and internal I/O channels, JBOD, Storage virtualization using RAID and different RAID levels, RAID 0, RAID 1, RAID 10, RAID 01, RAID 4 and RAID 6, RAID Comparisons, Caching: Acceleration of hard disk access, Caching: Intelligent disk subsystems, Logical Unit Numbers, Remote Mirroring, Comparison, Availability of disk subsystems.	8
III	The physical i/o path from the CPU to the storage system, SCSI(Small Computer System Interface): basics, Storage Networks, Fibre Channel Protocol Stack: Links & Topologies, (Fibre Channel 0) FC0, (Fibre Channel 1) FC1, (Fibre Channel 2) FC2, (Fibre Channel 3) FC3, Link & Fabric Services, (Fibre Channel 4) FC4 & (Upper Layer Protocols) ULPs.	8
IV	Local file systems: File systems and Databases, Journaling, Snapshots, Volume Manager, Network file systems and file servers, Shared disk file systems, Comparison: NAS (Network Attached Storage), FC SAN (Fibre Channel Storage Area Networks) and iSCSI SAN	8
V	Definition of Storage virtualization, Implementation considerations, Storage virtualization on Block or File level, Symmetric and Asymmetric storage virtualization.	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Analyze and understand the concepts of Storage networks and its various technologies.
<b>CO2</b>	Apply different storage technologies to establish Data center to fulfill the Storage requirements.
<b>CO3</b>	Understand and apply the concepts like RAID, LUN and Remote mirroring To maintain data safely and securely with backup.
<b>CO4</b>	Apply Fiber channel, SCSI to have error free, efficient and effective data transmission between nodes and datacenters.
<b>CO5</b>	Analyze different scenario to provide the solutions.

**SRI SIDDHARTHA INSTITUTE OF TECHNOLOGY- TUMAKURU**

(A constituent College of Siddhartha Academy of Higher Education, Tumakuru)

Academic year 2023-2024

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VII</b>
<b>Subject: .Net &amp; C#</b>			
<b>Subject Code:</b>	<b>CS7PE51</b>	<b>L – T – P - C:</b>	<b>3–0–0–3</b>

Sl. No	Course Objectives
1	To learn basic programming in .net and C# .
2	Understand Object Oriented Programming concepts in C# programming language.
3	Understand event handling to design GUI.
4	Study object model and file systems.

Unit	Description	Hrs
I	<b>.Net Framework Overview-</b> Architecture-.Net Framework class Libraries- CLR-Metadata-Interoperability-Assemblies-the .net Packaging system-CLR-MSIL , Introduction to Visual Studio.Net-C# Programming Concepts- Predefined Types- Value types and reference type, Classes and Objects, Constructors and methods , Collection classes: Array List , Hash Table, Stack ,Queue, indexers and properties.	8
II	<b>String class:</b> methods and properties of string class, enumerations, boxing and unboxing, OOPS concepts: Encapsulation, data hiding, inheritance, interfaces, polymorphism, operator overloading, overriding Methods, Static Class members, Delegates and events. Exception Handling, garbage collector, generics and collection	8
III	<b>Basics of Windows Programming-</b> Event Driven Programming, Windows Forms, Using common controls-Labels, textboxes, buttons, check boxes, radio button, progress bar, combo box, list box. Components-timer, image list, Menus, Modal and Modeless Dialog Boxes, MDI, Mouse and keyboard event handling.	8
IV	<b>Introduction to ADO.Net-Object Model-</b> System. Data Namespace- Data Bound controls- Connected Mechanism-Disconnected mechanism-.Net Data Providers.	8
V	<b>Files:</b> System.IO, directory and file types, Stream readers and stream writers, working with binary data.	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Understand the concept of .net frame work and C# language fundamentals.
<b>CO2</b>	Understand the basic libraries and its functions.
<b>CO3</b>	Built and debug well formed web forms.
<b>CO4</b>	Develop web application using ADO.net

**Course Articulation Matrix**

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VII</b>
<b>Subject: Business Intelligence and its Applications</b>			
<b>Subject Code:</b>	<b>CS7PE52</b>	<b>L – T – P - C:</b>	<b>3–0–0–3</b>

Sl. No	Course Objectives
1	Assess Advanced BI concepts and core IT concepts
2	Explain predictive analytics fundamentals
3	Facilitate advanced problem-solving using data mining
4	Critique problems, issues, and trends using predictive analysis

Unit	Description	Hrs
I	<b>Introduction to Business Intelligence</b> Introduction to OLAP and OLAP, BI Definitions & Concepts, Business Applications of BI, BIO Framework, Role of Data Warehousing in BI, BI Infrastructure Components BI Process, BI Technology, BI Roles & Responsibilities.	8
II	<b>Basics of Data Integration (Extraction Transformation Loading)</b> Concepts of data integration need and advantages of using data integration, introduction to common data integration approaches, introduction to ETL using SSIS, Introduction to data quality, data profiling	8
III	<b>Introduction to Multi-Dimensional Data Modeling</b> Introduction to data and dimension modeling, multidimensional data model, ER Modeling VS .Multi-dimensional modeling	8
IV	<b>Introduction to Multi-Dimensional Data Modeling</b> Concepts of dimensions, facts, cubes, attributes, hierarchies, star and snowflake schema, introduction to business metrics and KPIs, Creating cubes using SSAS.	8
V	<b>Basics of Enterprise Reporting</b> Introduction to enterprise reporting, concepts of dashboards, balanced scorecards, introduction to SSRS architecture, enterprise reporting using SSRS	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Able to understand how intelligently data is used in industry.
<b>CO2</b>	Able to understand the guidelines to utilize various modern tools for data handling.
<b>CO3</b>	Able to understand the recent applications to make report in enterprise.
<b>CO4</b>	Able to understand the multi-dimensional data modeling for BI applications.

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VII</b>
<b>Subject: Software Testing</b>			
<b>Subject Code:</b>	<b>CS7PE53</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	Fundamentals for various testing methodologies.
2	Describe the principles and procedures for designing test cases.
3	Provide supports to debugging methods.
4	Acts as the reference for software testing techniques and strategies.

Unit	Description	Hrs
I	<b>Introduction:</b> Purpose of Testing, Dichotomies, Model for Testing, Consequences of Bugs, Taxonomy of Bugs.  Flow graphs and Path testing: Basics Concepts of Path Testing, Predicates, Path Predicates and Achievable Paths, Path Sensitizing, Path Instrumentation, Application of Path Testing.	8
II	<b>Transaction Flow Testing:</b> Transaction Flows, Transaction Flow Testing Techniques.  Dataflow testing: Basics of Dataflow Testing, Strategies in Dataflow Testing, Application of Dataflow Testing.	8
III	<b>Domain Testing:</b> Domains and Paths, Nice & Ugly Domains, Domain testing, Domains and Interfaces Testing, Domain and Interface Testing, Domains and Testability.	8
IV	<b>Paths, Path products and Regular expressions:</b> Path Products & Path Expression, Reduction Procedure, Applications, Regular Expressions & Flow Anomaly Detection.  Logic Based Testing: Overview, Decision Tables, Path Expressions, KV Charts, Specifications	8
V	<b>State, State Graphs and Transition Testing:</b> State Graphs, Good & Bad State Graphs, State Testing, Testability Tips.  <b>Graph Matrices and Application:</b> Motivational Overview, Matrix of Graph, Relations, Power of a Matrix, Node Reduction Algorithm, Building Tools.	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Capable to support in generating test cases and test suites.
<b>CO2</b>	Having knowledge to test the applications manually by applying different testing methods and automation tools.
<b>CO3</b>	Apply tools to resolve the problems in Real time environment.
<b>CO4</b>	Analyse different testing techniques individually.

<b>Department: Computer Science &amp; engineering</b>	<b>Semester: VII</b>
<b>Subject: Cryptography &amp; Network Security Lab</b>	
<b>Subject Code: CS7LB1</b>	<b>L – T – P - C: 0 – 0 – 3 – 1.5</b>

Sl. No	Course Objectives
1	Understand the concepts of different encryption algorithms like Caesar, Playfair, Hill cipher.
2	Get the overview of symmetric algorithm like DES.
3	Understand and implement asymmetric algorithm like RSA and Diffie-Hellman.
4	Develop Digital Signature Scheme for signing and verification of messages.

**LAB CONTENT**

Sl. No	Experiment Description
1	Implement the following Substitution and Transposition techniques: a) Caesar Cipher b) Playfair Cipher c) Hill Cipher d) Rail fence Cipher e) Mono-alphabetic Cipher
2	Implement the following algorithms: a) DES b) RSA c) Diffie-Hellman d) SHA-1
3	Implement the Signature Scheme - Digital Signature Standard.

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Develop and execute various symmetric ciphers.
<b>CO2</b>	Implement various asymmetric encryption algorithms.
<b>CO3</b>	Implement Digital Signature algorithm for signing and verification of messages.

**Course Articulation Matrix**

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

<b>Subject: Advanced Database and Big Data Lab</b>			
<b>Subject Code:</b>	<b>CS7LB2</b>	<b>L – T – P – C:</b>	<b>0 – 0 – 3 – 1.5</b>

Sl. No	Course Objectives
1	Practice advance database programming concepts
2	Practice programming tools PIG and HIVE in Hadoop eco system.
3	Implement best practices for Hadoop development.

Sl. No	Experiment Description
<b>CYCLE - I</b>	
1	Write a program to implement database triggers in PL/SQL by using following schema -employee(e_id, e_name, e_doj, e_salary, e_age, primary key(e_id)) i. Create an employee table and insert any five records. Write row-level trigger for salary changes, Display the relevant message (insert / update / delete operations on employee)
2	Write a program to implement database triggers in PL/SQL by using following schema – employee(e_id,e_name,e_age, primary key(e_id)) i. Create an employee table and insert any five records. ii. Write a trigger to check the age of an employee is between 18 to 58, if not raise an error. (during insert / update / delete operations on employee)
3	Write a program to implement cursor in PL/SQL to display the employee details from the following table. emp (eno,ename,designation,doj,salary, primary key(eno))
4	Write a program to implement Procedure in PL/SQL to display the employee details from the following table. employee(eno, ename, designation, doj, salary , primary key(eno))
5	Write a program to implement packages in PL/SQL by using following schema. employee(id, name, age, address, salary, primary key (id)); Create the package for adding, removing and listing a Employee. Display suitable output
<b>CYCLE- II</b>	
1	Querying Data using MangoDB 1. Create a collection named "products" with fields: "name", "category", "price", and "stock". 2. Insert multiple documents into the "products" collection. 3. Write queries to find all products in a specific category. 4. Retrieve products with a price less than a certain value. 5. Find products that are out of stock. 6. Count the number of products in a specific category.
2	Aggregation Framework 1. Create a collection named "orders" with fields: "order_date", "total_amount", and "customer_id". 2. Insert orders into the "orders" collection. 3. Write an aggregation pipeline to calculate the total sales per month. 4. Calculate the average order amount for each customer.

	<p>5. Find the customer with the highest total order amount.</p> <p>6. Group orders by year and month and calculate the total revenue for each period.</p>
<b>3</b>	<p>Indexing and Performance</p> <ol style="list-style-type: none"> <li>1. Insert a large number of documents into a collection.</li> <li>2. Measure the time taken for a simple query without an index.</li> <li>3. Create an index on a specific field and measure the query performance again.</li> <li>4. Experiment with compound indexes and observe the impact on query performance.</li> <li>5. Monitor the performance of the database using the MongoDB profiler.</li> </ol>
<b>4</b>	<p>Data Modeling</p> <ol style="list-style-type: none"> <li>1. Design a data model for an e-commerce website, including collections for users, products, orders and reviews.</li> <li>2. Implement relationships between collections using references or embedded documents.</li> <li>3. Insert sample data into the collections.</li> <li>4. Write queries to retrieve products along with their reviews.</li> <li>5. Calculate the average rating for each product based on its reviews.</li> <li>6. Implement a feature to allow users to leave reviews for products and update the data model accordingly.</li> </ol>
<b>5</b>	<p>Aggregation Pipeline Optimization</p> <ol style="list-style-type: none"> <li>1. Create a collection named "logs" with fields: "timestamp", "user_id", and "action".</li> <li>2. Insert logs into the "logs" collection.</li> <li>3. Write an aggregation pipeline to count the number of actions performed by each user.</li> <li>4. Analyze the performance of the aggregation pipeline using the \$explain option.</li> <li>5. Optimize the pipeline by rearranging stages and utilizing indexes.</li> <li>6. Compare the execution times before and after optimization.</li> </ol>
<b>6</b>	<p>Implement MongoDB queries using CRUD operations for a restaurants collection For the structure of "Restaurants" collection</p> <ol style="list-style-type: none"> <li>1. Write a MongoDB query I. to display all the documents in the collection restaurants</li> <li>2. To display the fields restaurant_id, name, borough and cuisine for all the documents in the Collection restaurant.</li> <li>3. To display the fields restaurant_id, name, borough and cuisine, but exclude the field _id for all the documents in the collection restaurant</li> <li>4. To display all the restaurant which is in the borough Bronx</li> <li>5. To display the first 5 restaurant which is in the borough Bronx.</li> <li>6. To find the restaurants who achieved a score more than 90</li> <li>7. To find the restaurants that achieved a score, more than 80 but less than 10</li> </ol>
<b>CYCLE- III</b>	
<b>I</b>	<p>Execute the following commands in HADOOP.</p> <ol style="list-style-type: none"> <li>A. To get the list of directories and files at the root of HDFS.</li> <li>B. To get the list of complete directories and files of HDFS.</li> <li>C. To create a directory (say, sample) in HDFS.</li> <li>D. To copy a file from local file system to HDFS.</li> <li>E. To copy a file from HDFS to local file system</li> <li>F. To copy a file from local file system to HDFS via copy From Local command</li> <li>G. To copy a file from Hadoop file system to local file system via copy To Local</li> <li>H. To display the contents of an HDFS file on console</li> <li>I. To copy a file from one directory to another directory</li> <li>J. To remove a directory HDFS.</li> </ol>
<b>II</b>	<b>Execute the following commands in HIVE</b>

	<p>A. To create a database named “STUDENTS” with comments and database pro          B. To display the list of all databases          C. To describe the database          D. To describe the extended database          E. To alter the database properties          F. To make the database as current working database          G. To drop database          H. To create managed table named ‘STUDENT’.          I. To describe the “STUDENT” table          J. To create external table name “EXT_STUDENT”.          K. To load data into the table from file named student.tsv</p>
III	<p><b>Execute the following commands in PIG using the table</b>          Input :Student (rollno:int, name:chararray, gpa:float);          Department( rollno:int, deptno:int, deptname:chararray);</p> <p>A. Find the tuples of those student where the GPA is greater than 4.0          B. Display the name of all students in uppercase          C. Group tuples of students based on gpa          D. To remove duplicate tuples of students.          E. Display the first 3 tuples from the “student” relation.          F. Display the name of students in Ascending order          G. To Join two relations namely “student” and “department “ based on the value in the “rollno” column          H. To merge the contents of relations namely “student” and “department “</p>

**Course Outcomes:**

Course outcome	Descriptions
CO1	Implement the concept of Triggers, Cursors and procedures,
CO2	Implement the CRUD operation in MANGO-DB
CO3	Implement the Pig latin scripts and HIVE programming.

**Course Articulation Matrix**

<b>Subject Code:</b>	<b>CS8PE11</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	Understand the basic concepts and principles of mobile computing.
2	Discuss the various Emerging Technologies of mobile computing.
3	Compare the different architectures and techniques of mobile Communication Networks.
4	Understand the concepts of SMS and WAP Applications.

Unit	Description	Hrs
I	<b>Mobile computing Architecture:</b> Internet-The Ubiquitous Network, Architecture for Mobile Computing, Three-tier Architecture, Design Considerations for Mobile Computing, Mobile Computing through Internet, Making Existing Applications Mobile-Enabled.	8
II	<b>Emerging Technologies:</b> Introduction, Bluetooth-Bluetooth Protocol, Bluetooth Protocol Stack, Bluetooth Security, Bluetooth Application Models, Radio Frequency Identification (RFID), Wireless Broadband (WIMAX), Mobile IP-Discovery, Registration, Tunneling, Cellular IP, Internet Protocol Version 6(IPV6)-IPV6 Security, Migrating from IPV4 to IPV6, Mobile IP with IPV6.	8
III	<b>Global System for Mobile Communication (GSM):</b> Global System for Mobile Communications, GSM Architecture, GSM Entities, Call Routing in GSM, PLMN Interfaces, GSM Addresses and Identifiers, Network Aspects in GSM, Mobility Management, Personal Communication Service.	8
IV	<b>Short Message Service (SMS) and Wireless Application Protocol (WAP):</b> Short Message Service (SMS)-Strength of SMS, SMS Architecture, Value Added Service through SMS, Introduction to WAP, WAP, WAE, MMS, GPRS Applications.	8
V	<b>General Packet Radio Service (GPRS):</b> Introduction, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations, Data Services in GPRS, Applications for GPRS, Limitations of GPRS, Billing and Charging in GPRS.	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Explain the various design Considerations for Mobile Computing.
<b>CO2</b>	Analyze the principles and theories of mobile computing technologies.
<b>CO3</b>	Compare the different aspects of mobile Communication Networks.
<b>CO4</b>	Outline the concept of SMS and WAP Applications.

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VIII</b>
<b>Subject: Software Architecture and Design Patterns</b>			
<b>Subject Code:</b>	<b>CS8PE12</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

<b>Sl. No</b>	<b>Course Objectives</b>
1	Learn the architecture and build the system from the components.
2	Be capable of applying knowledge to create software architecture for an application.
3	Be able to explain the role of analysing architectures.
4	Learn architectural techniques to design and implement a real-world software system.

<b>Unit</b>	<b>Description</b>	<b>Hrs</b>
I	<b>INTRODUCTION:</b> The Architecture Business Cycle: Where do architectures come from? Software processes and the architecture business cycle; what makes a “good” architecture? What software architecture is and what it is not; other points of view; Architectural patterns, reference models and reference architectures; Importance of software architecture; Architectural structures and views.	8
II	<b>Architectural Styles and Case Studies:</b> Architectural styles; Pipes and filters; Data abstraction and object-oriented organization; Event-based, implicit invocation; Layered systems; Repositories; Interpreters; Process control; Other familiar architectures; Heterogeneous architectures. Case Studies: Keyword in Context;	8
III	<b>Architectural Patterns – 1:</b> Introduction; from mud to structure: Layers, Pipes and Filters, Blackboard, Distributed Systems: Broker	8
IV	<b>ARCHITECTURAL PATTERNS – 2:</b> Interactive Systems: MVC, Presentation-Abstraction-Control. Micro kernel and Refection	8
V	<b>Designing and Documenting Software Architecture: Architecture in the life cycle:</b> Designing the architecture; forming the team structure; creating a skeletal system. Uses of Architectural documentation; Views; choosing the relevant views; documenting a view; Documentation across views	8

**Course Outcomes:**

<b>Course outcome</b>	<b>Descriptions</b>
<b>CO1</b>	To apply the knowledge of various architectural tactics and styles in given scenario
<b>CO2</b>	To apply architectural styles for designing software systems.
<b>CO3</b>	Identify and assess the quality attributes of a system at the architectural level.
<b>CO4</b>	Generate architectural alternatives for a problem and selection among them.

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VIII</b>
<b>Subject: User Interface Design</b>			
<b>Subject Code:</b>	<b>CS8PE13</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	To study the concept of menus, windows, interfaces
2	To study about business functions
3	To study the characteristics and components of windows and the various controls for the windows.
4	To study about various problems in windows design with color, text, graphics and To study the testing methods

Unit	Description	Hrs
I	The User Interface-Introduction, Overview, The importance of user interface – Defining the user interface, The importance of Good design, Characteristics of graphical and web user interfaces-The Graphical User Interface, The Web User Interface, Principles of user interface design.	
II	The User Interface Design process- Obstacles and Pitfalls in the Development Path, Usability, Important Human characteristics in Design, Human Interaction speeds, Understand the Business functions-Business definition and requirement analysis, Determining Basic Business Functions, Design standards or Style Guides.	
III	Develop System menus and navigation schemes- Structures of menus, Functions of menus, Contents of menus, Formatting of menus, Phrasing the menu, Selecting menu choices, Website Navigation, Kinds of graphical menus.	
IV	Select the Proper Kinds of windows- Window Characteristics, Components of a window, Window presentation styles, Types of window, Organising window functions, The web and the Browser, Select the proper Interaction devices - Input Devices, Output Devices.	
V	Choose the proper Screen based controls- Operable control, Text Entry / Read-only control, Selection controls, Custom control, Presentation control, Examples.	

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Gain insight into theories and current topics in user interface design.
<b>CO2</b>	Design the User Interface like menu creation, windows creation and connection between menus and windows.
<b>CO3</b>	Get Practical experience in design of the components that make up a graphical user interface.
<b>CO4</b>	to organise information, explore and choosing the right UI patterns.

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VIII</b>
<b>Subject: Advanced DBMS</b>			
<b>Subject Code:</b>	<b>CS8PE14</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	Learn the concepts and techniques for data storage and query Evaluation.
2	Understand the concept of distributed database technology.
3	Learn the guidelines for index selection and tuning techniques.
4	Understand the recent applications in different databases.

Unit	Description	Hrs
I	<b>Overview of Storage and Indexing, Disks and Files: Data on external storage;</b> File organizations and indexing; Index data structures; Comparison of file organizations; Indexes and performance tuning. Memory hierarchy; RAID; Disk space management; Buffer manager; Files of records; Page formats and record formats.	
II	<b>Overview Of Query Evaluation, External Sorting: The system catalog;</b> Introduction to operator evaluation; Algorithms for relational operations; Introduction to query optimization; Alternative plans: A motivating example; what a typical optimizer does. When does a DBMS sort data? A simple two-way merge sort; External merge sort.	
III	<b>Evaluating Relational Operators:</b> The Selection operation; General selection conditions; The Projection operation; The Join operation; The Set operations; Aggregate operations; The impact of buffering.	
IV	<b>Distributed databases and client-server Architectures:</b> Distributed database concepts, data fragmentation, Replication and allocation techniques for distributed database design. Types of distributed a systems, query processing in Distributed databases, overview of concurrency control and recovery in distributed databases. An overview of 3-tier client server architecture.	
V	<b>Physical Database Design And Tuning: Introduction;</b> Guidelines for index selection, examples; Clustering and indexing; Indexes that enable index-only plans; Tools to assist in index selection; Overview of database tuning; Choices in tuning the conceptual schema; Choices in tuning queries and views; Impact of concurrency; DBMS benchmarking More Recent Applications: Mobile databases; Multimedia databases; Geographical Information Systems; Genome data management.	

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Explain the basic concepts of how data is store in file organization, indexing and query optimization.
<b>CO2</b>	Able to apply the choices of database tuning techniques.
<b>CO3</b>	Analyze the concept and working of distributed database system.
<b>CO4</b>	to organise information, explore and choosing the right UI patterns.

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VIII</b>
<b>Subject: Information Retrieval System</b>			
<b>Subject Code:</b>	<b>CS8PE21</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	Demonstrate genesis and diversity of information retrieval situations for text and hyper media.
2	Demonstrate the usage of different data/file structures in building computational search engines.
3	Analyze the performance of information retrieval using advanced techniques such as classification, clustering, and filtering over multimedia.
4	Demonstrate Information visualization technologies like Cognition and perception in the Internet or Web search engine.

Unit	Description	Hrs
I	Introduction: Retrieval strategies: vector space model, Probabilistic retrieval strategies: Simple term weights, Non binary independence model, Language models.	
II	Retrieval Utilities: Relevance feedback, clustering, Passage based retrieval, N-grams, Regression analysis, Thesauri.	
III	Retrieval utilities: Semantic networks, parsing Cross –Language: Information Retrieval: Introduction, Crossing the Language barrier.	
IV	Efficiency: Inverted Index, Query processing, Signature files, Duplicate document detection.	
V	Integrating structured data and text. A historical progression, Information retrieval as relational application, Semi Structured search using a relational schema. Distributed Information Retrieval: A theoretical Model of Distributed retrieval, web search	

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Describe the objectives of information retrieval systems.
<b>CO2</b>	Describe models like vector-space, probabilistic and language models to identify the similarity of query and document.
<b>CO3</b>	Implement clustering algorithms like hierarchical agglomerative clustering and k-means algorithm.
<b>CO4</b>	Understand relevance feedback in vector space model and probabilistic model.

1	An Introduction to Information Retrieval	Christopher D Manning, PrabhakarRaghavan, HinrichSchutze	Cambridge University Press, England, 2009

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VIII</b>
<b>Subject: System Simulation and Modelling</b>			
<b>Subject Code:</b>	<b>CS8PE22</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	Develop mathematical formulation for linear programming and transportation problem
2	Define Queuing system and their characteristics.
3	Construct the required activities in an efficient manner so as to complete it on or before a specified time limit and at the minimum cost.
4	Develop mathematical model for interactive decision.

Unit	Description	Hrs
I	<b>Introduction:</b> When simulation is the appropriate tool and when it is not appropriate, Advantages and disadvantages of Simulation; Areas of application, Systems and system environment; Components of a system; Discrete and continuous systems, Model of a system; Types of Models, Discrete-Event System Simulation examples: Simulation of queuing systems. General Principles, Simulation Software: Concepts in Discrete-Event Simulation. The Event-Scheduling / Time-Advance Algorithm, Manual simulation Using Event Scheduling.	8
II	<b>Statistical Models in Simulation</b> Review of terminology and concepts, Useful statistical models, Discrete distributions. Continuous distributions, Poisson process, Empirical distributions. Queuing Models: Characteristics of queuing systems, Queuing notation, Long-run measures of performance of queuing systems, Long-run measures of performance of queuing systems cont., Steady-state behavior of M/G/1 queue, Networks of queues.	8
III	<b>Random-Number Generation</b> Properties of random numbers; Generation of pseudo-random numbers, Techniques for generating random numbers, Tests for Random Numbers, Random-Variate Generation: Inverse transform technique Acceptance-Rejection technique.	8
IV	<b>Input Modeling</b> Data Collection; Identifying the distribution with data, Parameter estimation, Goodness of Fit Tests, Fitting a non-stationary Poisson process, Selecting input models without data, Multivariate and Time-Series input models. Estimation of Absolute Performance: Types of simulations with respect to output analysis, stochastic nature of output data, Measure of performance and their estimation.	8
V	<b>Measures of performance and their estimation</b> Output analysis for terminating simulations Continued..., Output analysis for steady-state simulations. Verification, Calibration And Validation: Optimization: Model building, verification and validation, Verification of simulation models, Verification of simulation models, Calibration and validation of models, Optimization via Simulation	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Describe the role of important elements of discrete event simulation and modeling paradigm.
<b>CO2</b>	Conceptualize real world situations related to systems development decisions, originating from source requirements and goals.
<b>CO3</b>	Develop skills to apply simulation software to construct and execute goal- driven system models.
<b>CO4</b>	Interpret the model and apply the results to resolve critical issues in a real world environment.

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VIII</b>
<b>Subject: Blockchain Technology</b>			
<b>Subject Code:</b>	<b>CS8PE23</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	Understand the basics of blockchain technology
2	Describe the working principle of a Blockchain and its architecture
3	Explore different blockchain platforms
4	Understand the applications of Blockchain technology outside the currency

Unit	Description	Hrs
I	<b>Blockchain 101:</b> Distributed systems, The history of blockchain, Introduction to blockchain, Types of blockchain, CAP theorem and blockchain Benefits and limitations of blockchain	8
II	<b>Decentralization and cryptography:</b> Decentralization using Blockchain, Methods of decentralization, routes to decentralization, Blockchain and full echo system decentralization, Smart Contract, Decentralize organizations, Decentralized autonomous organization, Decentralized autonomous corporation, decentralized autonomous societies, Decentralized applications, Platforms for decentralization, Cryptographic primitives, Asymmetric cryptography, Public and Private keys- hash functions	8
III	<b>Bitcoin and Alternative coins:</b> Bitcoin, Transactions, Blockchain, Wallets, Bitcoin payments, Alternative Coins-Theoretical foundations, Bitcoin limitations.	8
IV	<b>Smart Contracts and Ethereum 101:</b> Smart Contracts: Definition, Ricardian contracts. Ethereum 101: Introduction, Ethereum blockchain, Elements of the Ethereum blockchain, Precompiled contracts, Accounts, Block, Ether, Messages, The Ethereum network, Applications developed on Ethereum	8
V	<b>Alternative Blockchains:</b> Blockchains- Kadena, Platforms, Blockchain-Outside of Currencies: Internet of Things, Government, Health, Finance, Media	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Describe the fundamental theory of blockchain such as decentralization, cryptography, and it's architecture.
<b>CO2</b>	Demonstrate the use on smart contracts and consensus protocols in implementing blockchains.
<b>CO3</b>	Analyze the design principles of different distributed ledger platforms including Ethereum, Bitcoin
<b>CO4</b>	Examine the applications of blockchain beyond cryptocurrencies

<b>Department: Computer Science and Engineering</b>		<b>Semester:</b>	<b>VIII</b>
<b>Subject: Cyber Security</b>			
<b>Subject Code:</b>	<b>CS8PE24</b>	<b>L - T - P - C:</b>	<b>3-0-0-3</b>

Sl. No	Course Objectives
1	Gain the knowledge of cyber security that helps to understand the implications of cybercrime.
2	Understand different types of Cyber-attacks with an overview on social engineering.
3	Learn about password cracking, trojan horses, backdoors, types of phishing and its related techniques.
4	Appreciate the concepts of cyber forensics and digital evidence.

Unit	Description	Hrs
I	<b>Introduction to Cybercrime:</b> Introduction, Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security, who are Cybercriminals? Classifications of Cybercrimes, Cybercrimes: An Indian Perspective, Hacking and the Indian Laws, A Global Perspective on Cybercrimes.	8
II	<b>Cyber offenses:</b> How Criminals Plan Them: Introduction, How Criminals Plan the Attacks, Social Engineering, Cyberstalking, Cybercafe and Cybercrimes. <b>Botnets:</b> The Fuel for Cybercrime.	8
III	<b>Tools and Methods Used in Cybercrime:</b> Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Keyloggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDOS Attacks	8
IV	<b>Phishing and Identity Theft:</b> Introduction, Methods of Phishing, Phishing Techniques, Spear Phishing, Types of Phishing Scams, Phishing Toolkits and Spy Phishing, Phishing Countermeasures, Identity Theft (ID Theft)	8
V	<b>Understanding Computer Forensics:</b> Introduction, Historical Background of Cyberforensics, Digital Forensics Science, The Need for Computer Forensics, Cyberforensics and Digital Evidence, Digital Forensics Life cycle.	8

**Course Outcomes:**

Course outcome	Descriptions
<b>CO1</b>	Describe various cybercrimes and cyber laws
<b>CO2</b>	Explain different types of Cyber-attacks, Criminal plans and fuel for cybercrime.
<b>CO3</b>	Illustrate Tools and Methods used in Cybercrime.
<b>CO4</b>	Justify the Need of Computer Forensics.

<b>Subject: Technical Seminar</b>			
<b>Subject Code:</b>	<b>CS8TS1</b>	<b>L – T – P - C:</b>	<b>0– 0 – 0 – 1</b>

**Guidelines for preparing Technical Seminar**

**1. Selection of Topic/Domain:**

Each student shall identify a topic/domain of current cutting edge technology in the field of Computer Science and Engineering. Student is also allowed to choose the recent research paper/article of the standard journal.

**2. Approval of the Topic:**

After selecting the topic or research paper, get approval by the concerned faculty.

**3. Collect and acquire thorough knowledge:**

Students are required to collect sufficient information (past and recent updates) about the topic they have chosen and allowed to read the related research papers and refer the books.

**4. Final Report and Presentation:**

Students are required to prepare a final report of the collected information about the topic chosen and prepare a Power point presentation under the guidance of the concerned faculty.

**Course outcomes:**

<b>Course outcome</b>	<b>Descriptions</b>
<b>CO1</b>	Survey the changes in the technologies relevant to the topic selected.
<b>CO2</b>	Discuss the technology and interpret the impact on the society, environment and domain.
<b>CO3</b>	Compile report of the study and present to the audience.

**Course Articulation Matrix**

<b>PO/PSO CO</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>	<b>PO7</b>	<b>PO8</b>	<b>PO9</b>	<b>PO10</b>	<b>PO11</b>	<b>PO12</b>	<b>PSO1</b>	<b>PSO2</b>

<b>Subject: Project Work Phase – II</b>			
<b>Subject Code:</b>	<b>18CS8PW2</b>	<b>L – T – P - C:</b>	<b>0– 0 – 18 – 9</b>

### Experiment Description

- Student should give a presentation to the guide on the system requirements and design phase which includes hardware and software requirements, system architecture, high level design, low level design, system models, required implementation tools and algorithms.
- Students are allowed to complete the project by implementing/simulating to generate expected results under the guidance of project guide.
- Students are required to prepare the final report of the project with the generated results, future scope and conclusions.
- Students have to demonstrate the working model of the project to their respective evaluation panel.

#### Evaluation:

- Continuous evaluation is done by respective evaluation panel based on the regularity, technical knowledge and competence, programming skills, communication skills, collaborative learning, demonstration skills and documentation skills of the students.

#### Demonstration:

- Students have to demonstrate the working model of the project to their respective project guide and for External examiner in the final exam.

#### Course Outcomes:

Course outcome	Descriptions
<b>CO1</b>	Design a suitable system according to the problem stated in project work phase – I.
<b>CO2</b>	Implement the design using necessary algorithms and tools.
<b>CO3</b>	Test the performance of the system with suitable data.
